

Ebola Virus 2014 West Africa Outbreak – [CDC website link](#)

Genetic analysis of the virus in this outbreak indicates that it is closely related (97% identical) to variants of Ebola virus (species *Zaire ebolavirus*) identified earlier in the Democratic Republic of the Congo and Gabon

Timeline of Infection	Diagnostic tests available
Within a few days after symptoms begin	- Antigen-capture enzyme-linked immunosorbent assay (ELISA) testing - IgM ELISA - Polymerase chain reaction (PCR) - Virus isolation
Later in disease course or after recovery	IgM and IgG antibodies
Retrospectively in deceased patients	- Immunohistochemistry testing - PCR - Virus isolation

Codes mentioned below are used for representing the Ebola virus diagnostic tests in electronic data exchange using HL7 message. These codes can be downloaded from CDC vocabulary server at <http://phinvads.cdc.gov>

[Ebola virus disease concept](#) provides the link to the following value sets: [Lab Test Name \(Ebolavirus\)](#) and [Lab Result \(Ebolavirus\)](#)

SNOMED is the standard used for reporting the results which includes microorganism. These SNOMED codes can be sent in HL7 Observation segment (OBX-5).

Concept Code	Concept Name	Preferred Concept Name	Preferred Alternate Code	Code System OID	Code System Name
424206003	Genus Ebolavirus (organism)	Ebolavirus	L-300C8	2.16.840.1.113883.6.96	SNOMED-CT
